Road safety first

NZSP-1 01 Motor-operated board lifting MZS 12V

The motor-operated board lifting enables to lift or lower the board by a linear actuator. This can be operated from the cabin of the towing vehicle using a remote control.

- the board is operated by remote control and lifted/lowered by a compact and robust linear actuator
- the motor has a bolt enabling manual lifting or lowering of the board in case of failure or emergency
- position of the board and operational information are displayed on the remote control with a 15m cable
- electronics protect the motor and the frame construction against overloading using a current-limit protection
