

Variable message signs LED VMS

Variable message signs VMS are modern devices for **regulating and directing traffic on roads and in tunnels and for informing drivers in real time**. With one or more symbols formed by LED light points on a black background. Another use of this technology is for "Devices for operational information" displaying messages for drivers. Main advantages are its simple and fast changing of symbols, **significantly higher visibility of the traffic sign and low power consumption**.

- > the traffic signs contain high-intensity LEDs and are **approved according to EN 12966-1 and EN 12899-1** for use on roads
- > LED diodes are supplied by **low current**, which guarantees a long life of the traffic sign **preserving its optical parameters for many years**
- > LED luminous intensity is controlled automatically depending on the surrounding light or it can be controlled manually
- > faulty LEDs detection
- > text can be displayed at various text sizes
- > sizes of the traffic signs as well as supply voltage can be designed upon your request

POSSIBLE USE OF VMS

- > variable message signs and devices for operational information on highways
- > flexible and highly visible warning of dangerous situations on roads
- > variable message signs for tunnels and in car parks
- > higher safety for pedestrian crossings
